ARTIFICIAL INTELLIGENCE

ADP(IT)

MINI PROJECT NO 2:

TOPIC:

AI AROUND ME

AI Layer Classification with Justification (20 Examples)

1. Face Unlock

Layer:

Computer Vision (Perception)

Justification:

It uses camera to see, detect, and match the face geometry.2. Siri / Google Assistant

Layer:

Natural Language Processing (NLP)

Justification:

It converts voice to text and understands the meaning of human language.3. Netflix Recommendation

Layer:

Machine Learning - Recommender System

Justification:

It learns from your past watch history to predict what you will watch next.4.
Google Maps

Layer:

Machine Learning + Reasoning

Justification:

It reasons over live traffic data to predict the fastest route.5. Gmail Spam Filter

Layer:

Machine Learning - Classification

Justification:

It classifies emails into spam and non-spam by learning from patterns.6. YouTube Shorts

Layer:

Recommender System

Justification:

It uses watch time, likes, and skips as signals to recommend the next video.7.

ChatGPT

Layer:

Generative AI (LLM)

Justification:

It generates new human-like text responses using a large language model.8.
Google Translate

Layer:

NLP - Machine Translation

Justification:

It understands context in one language and generates text in another.9. Alexa

Layer:

NLP + Speech Perception

Justification:

It perceives speech and then processes language to execute a command.10. Tesla Car

Layer:

Robotics + Perception + Reasoning

Justification:

It perceives road via cameras and decides steering/braking itself.11. Snapchat Filters

Layer:

Computer Vision

Justification:

It detects facial landmarks in real-time to place the filter.12. Daraz / Amazon Suggestions

Layer:

Recommender System

Justification:

It finds patterns in your shopping history to suggest products.13. JazzCash Fraud Detection

Layer:

Machine Learning - Anomaly Detection

Justification:

It learns normal transaction patterns and flags unusual ones.14. Grammarly

Layer:

NLP

Justification:

It analyzes grammar, spelling, and sentence structure to suggest fixes.15. Robot Vacuum

Layer:

Robotics + Sensors

Justification:

It uses sensors to perceive obstacles and navigate autonomously.16. Google Photos Search

Layer:

Computer Vision - Object Recognition

Justification:

It recognizes objects and scenes inside images without manual tags.17. Keyboard Next Word

Layer:

NLP - Predictive Text

Justification:

It predicts the next word based on previous words you typed.18. Spotify

Layer:

Recommender System

Justification:

It learns your listening taste and recommends similar songs.19. Midjourney

Layer:

Generative AI - Image Generation

Justification:

It generates a completely new image from a text description.20. Fingerprint Lock

Layer:

Biometrics / Perception

Justification:

It scans unique fingerprint patterns to identify the user.
